

# Oxford Street West Municipal Class Environmental Assessment

## **Integrated Transportation Community Advisory Committee** Meeting - November 15, 2023

## **Study Objectives**

The City of London (the City) is undertaking a Municipal Class Environmental Assessment (Class EA) to identify improvements to Oxford Street West to accommodate future growth over the next 25 years.

Improvements being explored as part of this study include:

- Roadway capacity needs
- Intersection operations
- Pedestrian and cyclist facilities and accessibility needs
- Roadway drainage and stormwater management
- Planning for rehabilitation / replacement of existing sewers and watermains

**Oxford Street West Municipal Class Environmental Assessment** 

# What is This Study About?

Integrated Transportation Community Advisory Committee – November 15, 2023

#### The study area is Oxford Street West from Westdel Bourne to Sanatorium Road

This study is being carried out in accordance with Schedule C of the Municipal Class Environmental Assessment (MCEA), (October 2000, as amended 2023), which is an approved process under the Ontario Environmental Assessment Act.

**Oxford Street West Municipal Class Environmental Assessment** Integrated Transportation Community Advisory Committee – November 15, 2023

# **Class EA Process & Study Schedule**

Subject to Council approval and funding.

Following the selection of the Preferred Solutions, the design process consists of a number of decision points for different components of the roadway. As the design progresses and our knowledge of conditions and constraints evolve, there may be design iterations and refinements.

### **Presented at PIC #1**

#### **Identify Design Considerations and** Constraints

Based on existing and future conditions

#### **Corridor Cross-Section and Bridge** Alternatives

Arrangement of roadway elements including travel lanes, cycling and pedestrian facilities

### **Oxford Street West Municipal Class Environmental Assessment** Integrated Transportation Community Advisory Committee – November 15, 2023

# Where We Are in the Design Process

#### **Preliminary Design**

A combination of all design components in developing a preliminary plan for Oxford Street West proposed improvements

### **Socio-Economic Environment:**

- Avoid or minimize impacts to private property
- Create an efficient cycling and pedestrian environment including at intersections
- Improve mobility for users of all ages and abilities

### **Cultural and Natural Environment:**

- Conserve significant built heritage resources, cultural heritage landscapes, and archaeological resources
- Protect burial locations
- Avoid or minimize works in the Thames River valley and other natural areas
- City's Climate Emergency Action Plan

### **Oxford Street West Municipal Class Environmental Assessment** Integrated Transportation Community Advisory Committee – November 15, 2023

# **Design Considerations and Constraints**

### **Design and Maintenance:**

- sidewalks, and streetscape
- development

### **Access Management**

- Review access to Enviro Depot
- Integrate with future development

 Follow best practices and meet current standards (design, accessibility, safety, etc.)

 Future maintenance and costs of all components including cycling facilities,

Stormwater management and integration with

There are several components that form the overall design for Oxford Street West. Design alternatives have been developed for each component. The design alternatives were assessed considering a wide range of factors under transportation planning, technical, and environmental (socio-economic, cultural, natural).

**Oxford Street West Municipal Class Environmental Assessment** Integrated Transportation Community Advisory Committee – November 15, 2023

# **Roadway Components**

**Road Cross-Section Design** Alternatives Widening & Active Transportation

**Intersection Design** Alternatives Westdel Bourne Kains/Commissioners Road

#### **Thames River Bridge Design Alternatives**

**Oxford Street West Municipal Class Environmental Assessment** Integrated Transportation Community Advisory Committee – November 15, 2023

# Factors for Assessment and Evaluation

The following criteria were used to assess the design alternatives for active transportation, intersections (Westdel Bourne and Kains/Commissioners Road), and the Thames River Bridge.

**Road Cross-Section** 

## **Design Considerations**

### In developing cross-section design alternatives, the following key constraints and feedback were considered:

- vehicular traffic
- sport, etc.) due to:

  - Connection to the Thames Valley Parkway and other trails

**Oxford Street West Municipal Class Environmental Assessment** 

• Steep grades translate to speed differential between cyclists and pedestrians in some areas • Physically separated and continuous facilities are preferred to separate pedestrians and cyclists from

• Expect a wide range of cyclists with varying skill level, experience, and purpose (commuting, recreation,

Surrounding land uses and facilities (schools, library, long-term care)

• Function of Oxford Street West as a key east-west connection from west London to downtown

• Oxford Street West is classified as an Urban Thoroughfare in the London Complete Streets Design Manual (2018). Urban Thoroughfares are anticipated to accommodate moderate volumes of cycling traffic

Ontario Traffic Manual (OTM) Book 18: Cycling Facilities guidance for urban roadways

## Integrated Transportation Community Advisory Committee – November 15, 2023

**Road Cross Section** 

## **Design Alternatives**

Road Cross Section (applies to all alternatives):

- Widening to 4-lanes (2-lanes in each direction)
- Active transportation facilities for pedestrians and cyclists
- Urban cross-section with curb and gutter
- Improvements within existing 36 m right-of-way

Design Alternative	Featu
Alternative A Multi-use Path (MUP) and Sidewalk	<ul> <li>Multi-use path (MUP) or s the road</li> <li>Pedestrians use MUP or s</li> <li>Cyclists use MUP</li> </ul>
Alternative B Cycle Track with MUP or Sidewalk	<ul> <li>MUP or sidewalk on either</li> <li>In-boulevard cycle track of</li> <li>Pedestrians use MUP or</li> <li>Cyclists may use MUP or</li> </ul>
Alternative C Sidewalk and Cycle Track	<ul> <li>Existing MUP replaced we Sidewalk and in-bouleval sides of the road</li> <li>Cyclists use in-boulevard</li> </ul>

Road Cross Section

### **Evaluation Summary**

<b>Evaluation Criteria</b>	Alternative A Multi-use Path (MUP) and Sidewalk	
Socio-Economic Environment	Neutral	
Cultural Environment	Neutral	
Natural Environment	Neutral	
Transportation	Neutral	
Technical	Preferred	
Overall Recommendation	Do Not Carry Forward	

**Oxford Street West Municipal Class Environmental Assessment** Integrated Transportation Community Advisory Committee – November 15, 2023

### A detailed assessment and evaluation of the cross-section design alternatives was completed to identify the preferred cross-section alternative. The table below provides a summary of the evaluation.

#### **Alternative B is preferred because:**

The corridor attracts and provides for a wide range of active transportation users (e.g., recreation cyclists, utilitarian cyclists, and pedestrians).

This alternative provides separate facilities for pedestrians, cyclists, and other active modes reducing risk of collision between

This alternative makes use of the existing MUP and sidewalk in corridor, which will save time and money during construction.

All alternative provide pedestrian and cycling facilities that are separated from vehicles.

### **Signalized Intersection**

**Oxford Street West Municipal Class Environmental Assessment** 

## Westdel Bourne Intersection

## **Design Alternatives**

## Integrated Transportation Community Advisory Committee – November 15, 2023

### Roundabout (2-lane)

### **Evaluation Summary**

<b>Evaluation Criteria</b>	Signalized Intersection
Socio-Economic Environment	Preferred
Cultural Environment	Preferred
Natural Environment	Neutral
Transportation	Neutral
Technical	Preferred
Overall Recommendation	<b>Carry Forward</b>

Oxford Street West Municipal Class Environmental Assessment

# Westde Bourne Intersection

### A detailed assessment and evaluation of the Westdel Bourne intersection design alternatives was completed to identify the preferred intersection configuration. The table below provides a summary of the evaluation.

#### Signalized intersection is preferred because:

- with archaeological potential.
- pedestrian intervals).
- roundabout.
- future traffic demand.

# Integrated Transportation Community Advisory Committee – November 15, 2023

The signalized intersection has a smaller footprint compared with the roundabout and therefore impacts less property and areas

Traffic signal enhancements may be implemented at the signalized intersection to improve pedestrian visibility and accessibility, comfort, and reinforce pedestrian rights-of-way while crossing the street (e.g., audible pedestrian signals & leading

The signalized intersection is simpler and less expensive to construct and has fewer utility impacts compared with the

Both alternatives provide sufficient capacity to accommodate

### **Signalized Intersection**

**Oxford Street West Municipal Class Environmental Assessment** Integrated Transportation Community Advisory Committee – November 15, 2023

# Kains/Commissioners Road Intersection

### **Design Alternatives**

### **Roundabout (2-lane)**

### **Evaluation Summary**

A detailed assessment and evaluation of the Kains/Commissioners Road intersection design alternatives was completed to identify the preferred intersection configuration. The table below provides a summary of the evaluation.

<b>Evaluation Criteria</b>	Signalized Intersection
Socio-Economic Environment	Preferred
Cultural Environment	Neutral
Natural Environment	Neutral
Transportation	Preferred
Technical	Preferred
Overall Recommendation	<b>Carry Forward</b>

**Oxford Street West Municipal Class Environmental Assessment** Integrated Transportation Community Advisory Committee – November 15, 2023

# **Kains/Commissioners** Road Intersection

#### Signalized intersection is preferred because:

- accessibility.
- compact design compared with the roundabout.
- leading pedestrian intervals).
- compared with the 2-lane\* roundabout.

\*Note: A 3-lane roundabout is not feasible at this location.

The intersection attracts a wide range of users due to nearby land uses (long-term care, residential, schools, recreation). A compact intersection is desirable for user safety, comfort, and

The signalized intersection has a smaller footprint and more

Traffic signal enhancements may be implemented at the signalized intersection to improve pedestrian visibility and accessibility, comfort, and reinforce pedestrian rights-of-way while crossing the street (e.g., audible pedestrian signals &

The signalized intersection operates with a better level of service

## **Existing Conditions**

- The bridge currently accommodates 2-lanes of traffic (1-lane in each direction), on-road bike lanes and a multi-use path (MUP).
- The existing bridge is wide enough to accommodate 4-lanes of traffic (2-lanes in each direction) and the existing MUP.
- Modifications to the bridge are being considered to enhance active transportation on the bridge.
- At PIC #1, four modification options were presented:
  - 1. Minor Improvements to Existing Structure– Carried Forward
  - 2. Retrofit Carried Forward
  - 3. Cantilever Carried Forward
  - 4. Widening Screened Out
- Widening the bridge structure was screened out due to impacts to the river valley and cost.

Oxford Street West Municipal Class Environmental Assessment

# Thames River Bridge

# Integrated Transportation Community Advisory Committee – November 15, 2023

### Minor Improvements to Existing Structure

- 4-lanes provided on existing structure by repainting the lanes
- New barrier on westbound structure to create a dedicated cycling facility
- Existing MUP on south side of bridge is retained
- No structural widening

# **Oxford Street West Municipal Class Environmental Assessment**

# Thames River Bridge

## **Design Alternatives**

### Retrofit

4-lanes and MUPs provided by shifting the median and constructing and/or relocating barrier walls No structural widening

Integrated Transportation Community Advisory Committee – November 15, 2023

- 4-lanes provided on existing structure by repainting the lanes
- Cantilever constructed on westbound structure to create an MUP
  - Existing MUP on south side of bridge is retained
- No structural widening

### **Evaluation Summary**

A detailed assessment and evaluation of the Thames River Bridge design alternatives was completed to identify the preferred alternative. The table below provides a summary of the evaluation.

<b>Evaluation Criteria</b>	Minor Improvements to Existing Structure
Socio-Economic Environment	Neutral
Cultural Environment	Neutral
Natural Environment	Preferred
Transportation	Not Preferred
Technical	Preferred
Overall Recommendation	Carry Forward as Interim Solution

**Oxford Street West Municipal Class Environmental Assessment** Integrated Transportation Community Advisory Committee – November 15, 2023

# Thames River Bridge

#### **Cantilever is preferred because:**

It best accomplishes the study objective to provide dedicated active transportation facilities on both sides of the structure to create a continuous network on Oxford Street West.

It provides the most desirable road cross section (greater than minimum shoulder widths on the bridge) compared with the other alternatives.

Some vegetation clearing is required during construction.

It is less expensive to construct compared with the retrofit.

## Interim Solution – Minor Improvements to Existing Structure

Today, pedestrians and cyclist use the multi-use path on the south side of the bridge. At this time, there is limited need for a pedestrian facility on the north side of the bridge.

The cost to construct a cantilever on the existing bridge is approximately \$5 to \$7 million. Considering the structure is in good condition and is not in need of immediate repair, minor improvements to the existing structure are recommended in the short term to provide a dedicated facility on the north side for cyclists.

The minor improvement include repainting the lanes on the bridge to provide 2-lanes in each direction and construction of a barrier on the north side of the bridge to create a westbound barrier separated bike lane.

### When will the cantilever be constructed?

When there is pedestrian demand on the north side of Oxford Street West between Kains Road and Sanatorium Road (e.g., land use change, key destinations).

### **Oxford Street West Municipal Class Environmental Assessment** Integrated Transportation Community Advisory Committee – November 15, 2023

# Thames River Bridge

# Preliminary Preferred Plan

- The Preliminary Preferred Plan includes:
  - Construction of cycle tracks, sidewalks and multi-use paths throughout the corridor
  - Widening Oxford Street West to 4-lanes
  - Reconstruction of all intersections accommodate widening, turn lanes, active transportation facilities (multi-use path, cycle track, sidewalk)
  - Reconstruction of all accesses
  - Construction of cantilever structure on north side of Thames River Bridge to provide an MUP

# **Oxford Street West Municipal Class Environmental Assessment**

Integrated Transportation Community Advisory Committee – November 15, 2023

# Next Steps

## Next Steps...

- Host Public Information Centre (PIC) #2 on December 6, 2023
- Review and consider feedback from agencies, Indigenous Communities and the public
- Refine Preliminary Design
- Complete final impact assessment
- Prepare the Environmental Study Report (ESR) to document the study findings
- Present study to Council
- Pending Council endorsement, issue Notice of Study Completion to initiate 30-day review period for ESR
