

Hi there,

I am just emailing in regards to the Hamilton road neighbourhood connectivity plan.

A map was released with the plans for the next 1-10 years. I was very disappointed to see that there is plans to pave the green space/hydro one fields that run through the neighbourhood. With the addition of so many side walks to the neighbourhood, the paving of the green space seems unnecessary. There are so many animals/critters/wild life that call this space home and use this area to travel between the forests. If we take this away from them we will be damaging their habitat and ecosystem further.

Please consider removing this from the plan as with new sidewalks all over the neighbourhood it seems really unnecessary and damaging to the environment.

Kind regards,
Angie
