

I am requesting to comment on the Rapid Transit Plan for the Strategic Priorities and Policy Committee public meeting of 26 May 2016, "I request that this email comment be placed on the meeting agenda."

The comment I am requesting to be placed on the meeting agenda is as follows:

According to information obtained by ReThink London YouTube video "The London Plan," the number of people using buses from 1996 to 2011 has grown by 84%. There have also been complaints from customers in regards to buses not being on time according to The London Free Press.

According to the City of London as per the article "Rapid Transit: A Look at the Light Rail Transit (LRT) Option," it has been studied that there will be one car for 250 people and a dedicated lane. With the City of London not having a major highway that travels from one part of the city to another like the Region of Waterloo has, it will be in the benefit of City Council to vote in favour of the Rapid Transit Plan as it will benefit not only the students going to school but it will also benefit the members of the community as well. Furthermore, it will also be powered by electricity which will reduce greenhouse gas emissions and this was found on the video, "Rapid Transit: A Look at the Light Rail Transit (LRT) Option."

Thank you very much for including my statement in the Council meeting as well as my statements to be published in the media.

Yours Truly,

Alim Nathoo
Advocate for LRT and for an amazing Transit Service.
