# Next is

- A road transportation system based on **electric modular vehicles**.
- The modules are able to physically couple and decouple each other creating a **bus-like walkable open space** that allows people and goods to move from one module to another.
- This unique feature guarantee a huge traffic, price, and efficiency optimization both in a **human driving** scenario and in a **self-driving** one.

# Drivers

Efficiency & Sustainability

No new infrastructures

Radically optimize logistics

Satisfy future passengers needs

Unlock all the potential of self-driving

Scalable ecosystem

A white Smart car is shown from a front-three-quarter view. A white, box-like 'next' module is attached to the rear of the car. Inside this module, six white silhouettes of people are visible, representing passengers. The car has a red 'X' logo on the front and a license plate that reads 'F 964050'. The background is a blurred city street.

6 people in the length  
of a Smart?

With **next** you can!

A single **next** module can fit  
6 people sitting plus 4 standing.

**next** future transportation inc.

[next-future-transportation.com](http://next-future-transportation.com)

**Short as a Smart and with Optimized Occupancy Rate Logistics**

# Why NEXT is different?

Not just stackable, it's a modular ecosystem

## Joined Modules Openspace

People can stand inside and walk through connected NEXT modules, like in a train or in a bus

## Not a Pod or Minibus

Other solutions even if stackable or self-driving are not modular, so not expandable or optimizable

## No New Infrastructures

NEXT is different from people mover or analog solutions because it goes on regular roads.

# Competitors Comparison

	next	Self-Driving Car	Modular Pods	Self-Driving Bus
Average Occupancy Rate	75%	55%	100%	35%
Traffic Footprint	54 ft	197 ft	123 ft	40 ft
Total Cost per Passenger per km <small>estimations for medium traffic scenario</small>	\$0.08	\$0.07	\$0.06	\$0.20

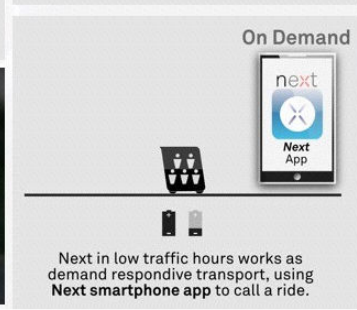

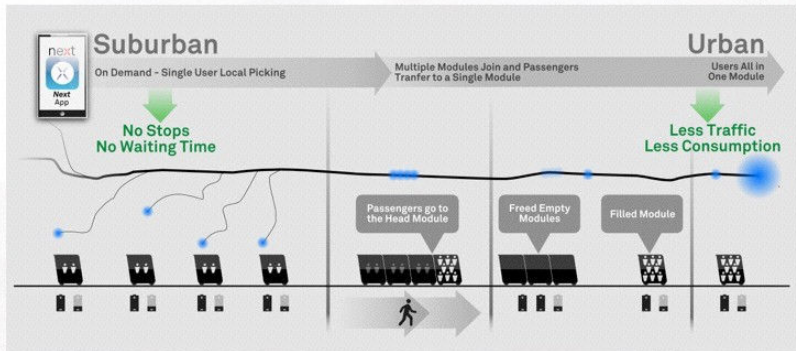

## In-Motion-Re-Distribution Goods Routing Software

IP: Packages dispatch optimization system via in-motion N2N re-distribution

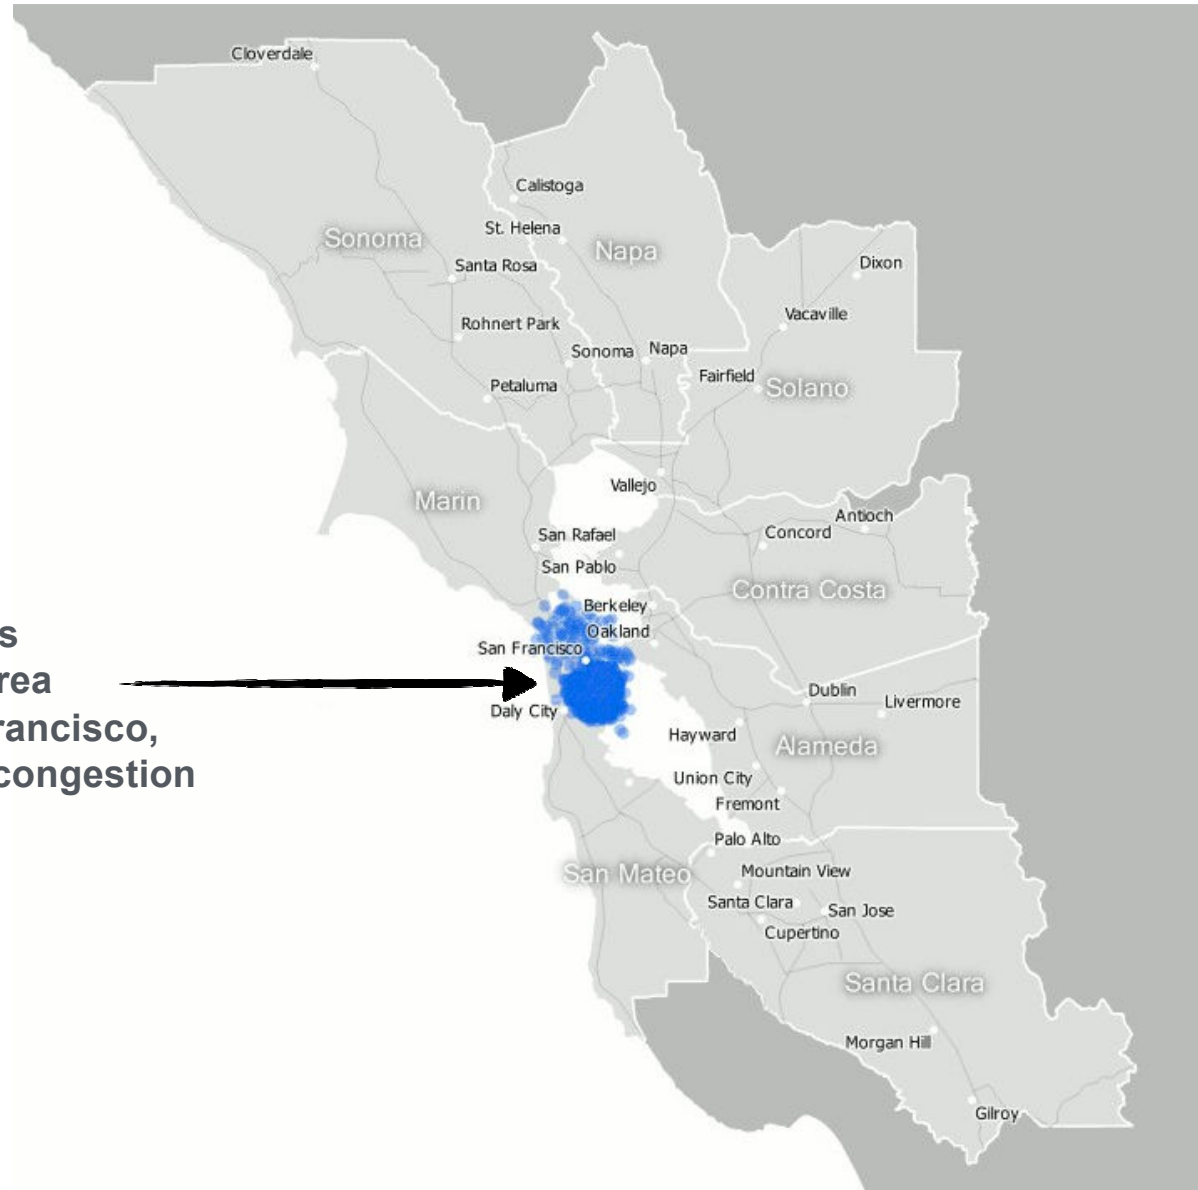

## In-Motion-Re-Distribution People Routing Software

IP: Passengers transport optimization system via in-motion N2N re-distribution

Bay  
Area  
Example  
Today

Single passenger cars  
from the entire Bay Area  
concentrate in San Francisco,  
creating huge traffic congestion

# Bay Area Example with NEXT

City Center Delivery

Many passengers, but concentrated in few NEXT units, enter San Francisco cutting up to 85% of traffic.

**Urban**  
Less Traffic  
Less Consumption

San Francisco

Users All in One Module

Full modules on HOV Lane

Freed modules go to other requests

Filled modules go on HOV lane

Multiple Modules Join and Passengers Transfer to a Single Module

Passengers go to head module

Local Pickup

No Stops  
No Waiting Time  
**Suburban**

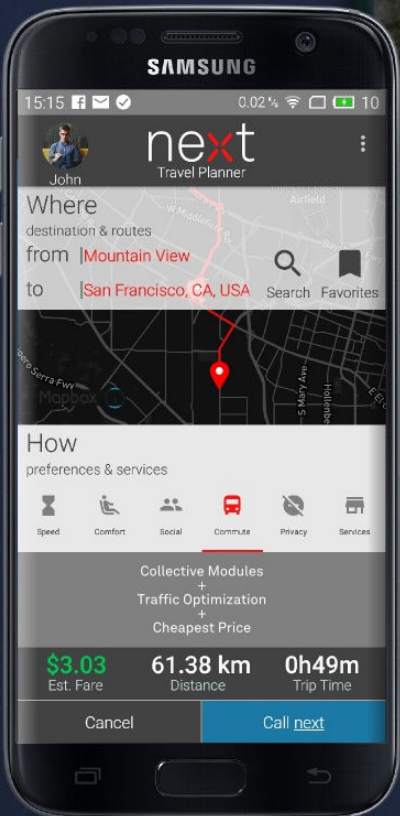

On Demand  
Single User  
Local Picking

Passengers in-motion  
Redistribution

Local Pickup

Local Pickup

Mountain View

2017

Hybrid Scalable System

2021

Human Driving

Upgrade

Complete Self-Driving

Sell NEXT Modules Fleets

Modular Fleet Optimization

On-Demand Services

- Modules for campus
- Cargo Modules
- Statically joined at a Rest Area to remove dynamic risk issues

- Autonomous private modules
- Gradual bus fleet replacement with modular NEXT buses

- On-demand mobility
- Third party services modules
- Automatic fleet coupling and decoupling at stations and stops

# Short but Safer

2.5 Tons

1.3 Tons

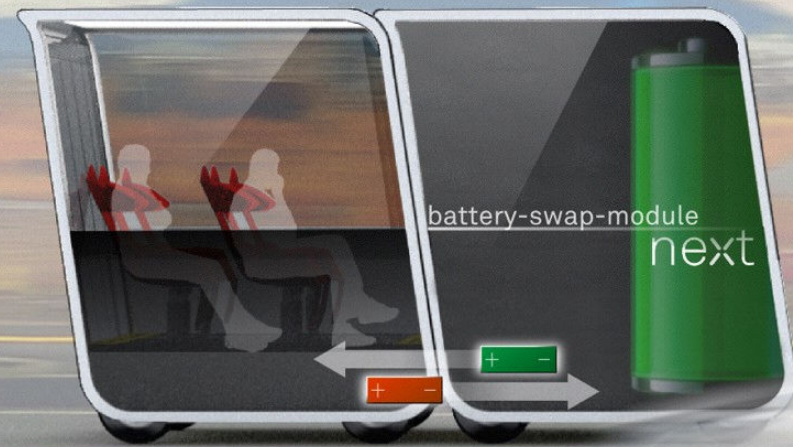

**Raised height of the passengers platform ensures improved safety**

**Short Length as a Smart but Safer than a regular Self-Driving-Car**

no more stops...  
to recharge your car

swap in motion!

When your **Next** battery is low, you don't need to stop.  
A dedicated **Next** reaches you and swap your battery pack, in motion!
