

To: Mayor and Council

for Council meeting Tues. Sept. 13/16

Concerning: Camden Terrace

reference to PEC item 14 from Tues. Sept. 6/16 meeting

From: Janet Huntten, 253 Huron St., London

Date: Monday, Sept. 12/16

Concern has been expressed about contamination in the soil beneath the buildings of Camden Terrace (479-489 Talbot Street).

The site assessment reports from exp Services Inc. include maps showing locations of their boreholes and monitoring wells, and all are outside the house boundaries.

The boreholes have identified contamination beneath the parking lot, in the fill.

Currently the identified impacted soils are covered by the asphalt parking lot or the concrete floor slab of the building which provides a barrier from the impacted fill material.

The Camden Terrace buildings are probably the first built on their site, indicating excavation, not fill.
