

What is CCA Certification?

The purpose of a certification program is to protect the public and the profession. The same is true of our CCA certification. It is a voluntary professional enhancement to a person's career credentials. Once certified we are telling our clients, employer and the public that we are serious about what we do as a professional. The American Society of Agronomy confers the certification to qualifying CCAs.

All successful certification programs have one common element and that is, to serve and protect the public interest. Many professions require a license to practice such as in medicine, engineering, and accounting. A license is basically a certification program offered by the legislating body. Certification programs offered by ASA are voluntary, but offer similar benefits to the public as licensing programs. Certification programs set standards for knowledge, skills, and conduct
