**Subject:** concerned citizen

Betty,

Please attach this note to the agenda for the Civic Works Committee meeting, item #3 for the public record.

I am concerned about the fluoride in our water supply.

I have done extensive research on it, and do not feel hydrofluorosilicic acid is safe to expose myself and my family to.

I am tired of having to drive out and buy and store unfluoridated water to have on hand for my young children. Yet I am forced to do this, because the water coming directly into my house through my taps is fluoridated without my approval, and I believe it to be unsafe. Until the city can prove otherwise, and especially to provide toxicology studies, the fluoridation of our water is continuing without my consent.
