

Betty,

Please include the following note and attachment on the Council meeting water fluoridation agenda item scheduled for this Tuesday, May, 1st, 2012 for public record.

Thanks,

Chris Gupta

Dear Council members:

Your constituents are not asking you to be experts or out guess/challenge the experts. Like you, we realize that none of us are experts in everything. We are simply asking you as our representatives to provide us the data that the city, or the experts it chooses to follow, has determined the safety of the chemicals being added to our water. The city administration on Water Fluoridation did not provide any primary data on toxicology, instead they have made totally erroneous explanations on the mechanisms of the how fluoride is obtained from industrial waste dissolved in our water. Our concern is shown in the attached slide. From this attachment our concern is clear as so many impurities are deliberately being added to our water.

This is a trivial request. Why some councillors are defending the status quo is beyond our comprehension. This is not an issue of convincing someone on the rights or wrongs of water fluoridation. We just want to see the safety data. Simply obtaining the **required toxicology studies** will end this discussion.
