How to keep your cat indoors

Though it's easiest to raise your cat to stay indoors as a kitten, it IS possible to train an adult cat!

To transition an outdoor cat to indoor life:

• Familiarize your cat to a scratching post and litter box first, and transition them slowly

 Feed your cat indoors, keeping them inside for increasingly longer times after feeding

Discourage cats from running outside by squirting them with water

 Give cats stimulating toys to help foster their natural behaviours (e.g. hunting-based toys, a cat tree or jungle for climbing), play with your cat, and try giving them catnip

- **Bring the outdoors inside**
- Provide a sunny window perch
- Try growing cat grass
- Provide hiding places

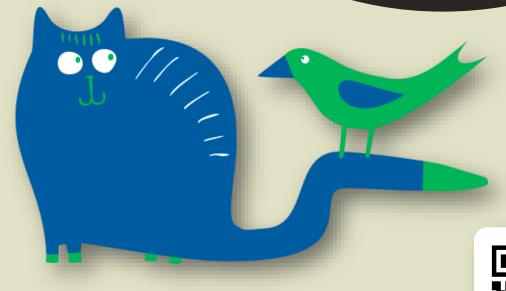

• Make the indoors comfortable

- Keep the litter tray clean
- Keep eating, drinking, litter, resting, and hiding places well-separated
- Consider a second cat as a playmate

Safe outdoor options:

- Provide a screen-enclosed outside area
- Harness train them for outdoor walks
- Ensure your cat has an ID tag or microchip and is spayed/neutered
- Consider a 'zip-line' for your cat to prevent them from roaming off your property

Your cat is in **DANGER** outside

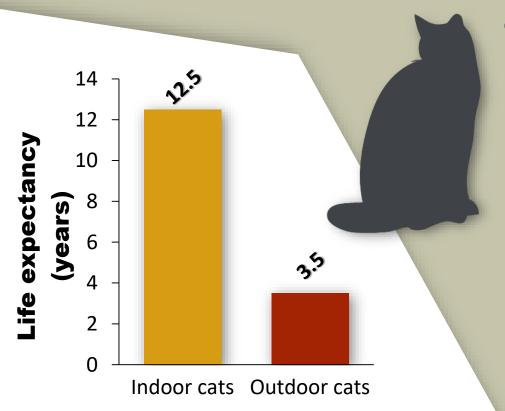

As many as 40% of domestic cats spend time roaming outdoors, but these cats encounter many dangers and have significantly lower life expectancies.

RISKS TO CATS OUTDOORS:

- Being hit by a car
- Becoming lost
- Abuse
- Frostbite
- Parasites (e.g. fleas, ticks)
- Disease (e.g. feline leukemia, feline aids, heartworm, rabies)
- Poisoning from garden plants, antifreeze, rat poison etc.
- Injury from fights with other animals

that roam free ARE EXPOSED TO DISEASES, VEHICLE COLLISIONS and OTHER CATS

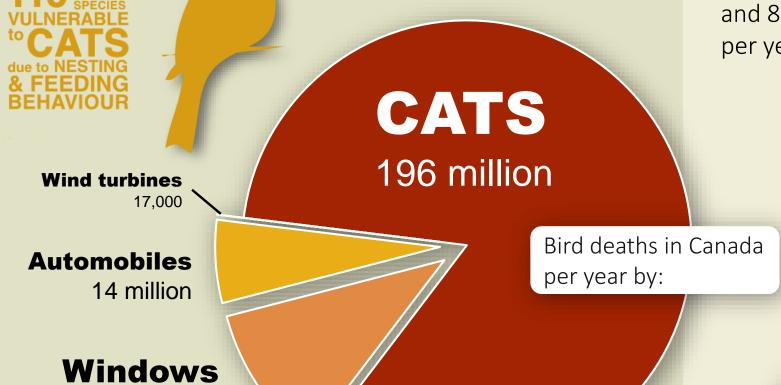

BIRDS are at risk

25 million

Birds are more than just a pretty song; they help to pollinate plants, disperse seeds, and control insect pests. Unfortunately, cats are the leading cause of direct, human-related songbird mortality. Vulnerable birds include many species at risk (e.g. Barn Swallow and Wood Thrush). Cats have already contributed to the extinction of 34 species of birds.

DID YOU KNOW?

A bell on your cat's collar only reduces bird kills by 40-50%

Our NATURAL HERITAGE is at risk

Cats are a non-native species in North America and can negatively impact local ecosystems. In addition to killing birds, cats prey on other wildlife including small mammals, reptiles, and amphibians, and can also transmit diseases. Loss of wildlife impacts other species such as native carnivores, and destabilizes the food web. This problem is exacerbated by increasing numbers of stray and feral cats.

DID YOU KNOW?

Each domestic outdoor cat kills an estimated 4-18 birds and 8-21 small mammals per year

Not at risk
