Subject: EEPAC working group comments on revised Eagle Ridge EIS

On behalf of the working group, EEPAC has no changes to its previous comments. We reviewed the revised Figure 8 and remain concerned about the site alteration for the TVP as it appears from Figure 8 that site alteration will occur in the ESA. It may also occur within the buffer of the wetland shown on Figure 7, however, because the buffer does not appear in Figure 8, we can only flag our concern.

If you have any questions, please contact the undersigned.
