Subject: Civic Works Committee April 23, 2012.

Betty,

Please include the following note for public record with the agenda for the "Civic Works Committee" scheduled for this Monday, April. 23, 2012.

Please vote to stop fluoridating London's drinking water. Hydrofluorosilicic acid is an industrial grade waste product, and even if it was purified to pharmaceutical grade (it contains arsenic and radium and other toxic elements), the Municipality of London has no right to contaminate my drinking water with it. You may not medicate me without my consent.

I have a Bachelor of Science in Human Physiology and a Master of Osteopathic Manual Science. I have done extensive research and I can say with confidence that the proof fluoridated drinking water is safe and effective at preventing dental caries is not in the public record, and if the Canadian or Ontario Dental Associations have it, they are unwilling to share.

I wish to be brief, but I would like to offer an argument I haven't yet heard expressed . If the City of London continues to fluoridate its drinking water given the many cries and warnings that there is a reasonable doubt about its safety, the City could expose itself to the possibility of litigation in the instance that safety studies do eventually prove that hydrofluorosilicic acid in drinking water indeed causes cancer or increases the incidence of hip fractures.

Regards,

Bradley Dundas BA BSc MOMSc
