

## **NOTICE OF ADDENDUM COMMENCEMENT AND PUBLIC INFORMATION CENTRE**

Tuesday June 27, 2017

**PUBLIC NOTICE**

### **Background**

In 2002, the City of London completed a Schedule B Municipal Class Environmental Assessment (Class EA) to meet planned growth and address stormwater quality, quantity and erosion control measures for the Hyde Park area (See Map). To date, four of six recommended stormwater management facilities (SWMFs) have been constructed along with improvements to the Stanton Drain. Several interim SWMFs have also been constructed to address growth demands as development has occurred.

In consideration of the SWMFs implemented to date, new stormwater management policy and permitting requirements and anticipated development patterns, the City is preparing an update to the original storm drainage and stormwater management servicing strategy.

### **Process**

The update will be documented in an addendum to the 2002 Class EA that considers optimizing the operation of existing SWMFs, the location and design of future SWMFs, the implementation of low impact development measures and permanent private systems (PPSs). The recommended strategy will include environmental protection requirements that enhance the water resources and ecological system's functionality. Other considerations include planned road improvements, connection with recreational paths/trails and property requirements. The recommended stormwater management servicing strategy identifies a number of planned projects that will be presented to the public and interested stakeholders for review and comment.

### **Public Information Centre**

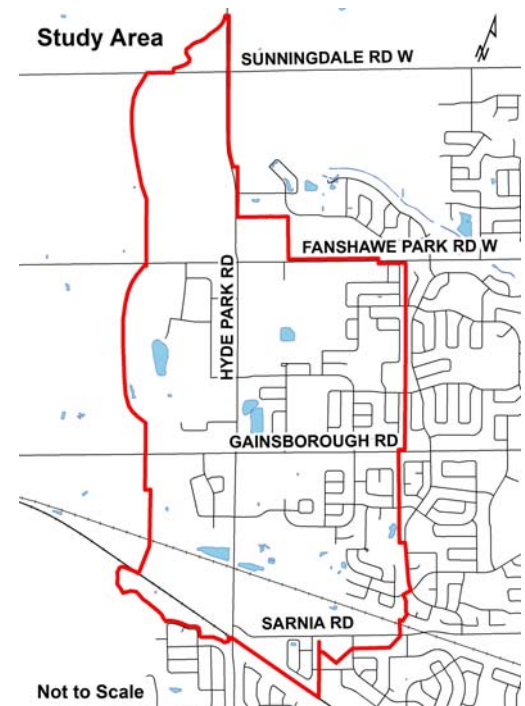

You are invited to attend the Public Information Centre (PIC) to be held:

**Date:** Tuesday June 27, 2017

**Time:** 5pm to 7pm

**Location:** Medway Community Center (119 Sherwood Forest Square)

This meeting will also satisfy the requirement to conduct a Public Participation Meeting for Hyde Park No. 5 SWM Facility and Hyde Park No. 6 SWM Facility (identified in the 2002 Class EA) as directed by the Civic Works Committee. The PIC will be conducted in an open house (drop-in) format, with display boards and study documentation available for review. We encourage you to attend the PIC, view presentation materials, speak with the study team members, and provide input on the recommended stormwater management servicing strategy.

## **We would like to hear from you**

Public consultation is an important part of this Study. Visit the project website at <http://www.london.ca/residents/Environment/EAs/Pages/default.aspx> for more information or contact us if you want to be placed on our mailing list for updates.
