Their "Infographic" depicts a Low Dam concept for small rivers, a Specialty of the GREEN BUG ENERGY INC., DEHLI, ON. The article explains safe water flow driving a small power generator and a screw designed to ensure safe passage for fish and other aquatic species. Apparently there is a feature story about GreenBug Energy's Turbines at [mag.cangeo.ca/apr16/greenbug](http://mag.cangeo.ca/apr16/greenbug).

My wife and I are supporters of the One River Concept and like the idea, as published in above mentioned magazine, to be considered, possibly incorporated, in the final version of the London's Masterplan.

Sincerely, Walter & Christine Furst, 17 Westmorland Court
