

I want to say that the examination of the possible dangers of fluoridation of our water is over due. As a tax payer, consumer and parent. My family have been medicated against our will . Without our consent and without adequate consideration of side effect from long term exposure. Cause and effect are hard to prove. The cigarette lobby still claims no direct proof of cancer from cigarettes yet smoking laws do exist . We need a serious non partisan examination of the health risks from Fluoride for ALL people. Please include my concerns at the meeting.

Mike Lucas London
