Subject: Strategic Priorities and Policy Committee submission 2019-03-10 cko
Importance: High

00. Submitted Sunday March 10, 2019 in advance of 9:00 am EDT Monday March 11 deadline, once with receipt asked for, to sppc@london.ca and jesse@helmer.ca and copy to cko at 11:40 pm EDT and subsequently sent to correspondents.

0. At the bottom of this submission, below my signature, is a wikipedia link with a super brief cut and paste to learn about "Agenda 21".

1. We're talking about 380 million dollars of government money, all of it from our pockets, through the three different levels.

2. In the summer of 1967, I was a student fortunate to travel in Europe, and my primary olfactory memory of one city was diesel exhaust.

3a. About 20 or 25 years ago, when Rev. Susan Eagle was on a committee, during a well-attended public participation meeting discussing whether to ban back-yard fires, several others and I protested, successfully, and I also took the opportunity to remind that London was still operating diesel buses.

3b. It was acknowledged that a small percentage of the population was sensitive to the smoke from back yard fires.

3c. Interestingly, also brought forward was the fact that there had been absolutely no fires caused by a back yard fire. This was a good example of the perhaps sincere but misguided use of the precautionary principle for the greater good, a phrase among an avalanche of newspeak joining waters muddied by censorship and propaganda, to maintain credibility that there is control in the situation, and with benevolent intent.

3d. Incidentally, I believe it was the Community and Protective Services Committee, and I mentioned in my two minutes that time that I was surprised that it wasn't being discussed in committee concerned with environment.

4a. I note that some cities are planning to ban diesel, perhaps a good move as it is problematic for approximately 100 percent of the population.

4b. I cannot advise of effects of the provincial emission control program relaxation on diesel exhaust.

4c. From wikipedia https://en.wikipedia.org/wiki/Diesel_exhaust. The International Agency for Research on Cancer is an intergovernmental agency forming part of the World Health Organization, part of the United Nations, and it has listed diesel exhaust as a Group 1 carcinogen.

5a. About mass-transit, in a push-back to city-oriented land-depriving Agenda 21 pressures, the City ought to declare also a commitment to individual transportation, giving it no inferior place to mass transit, as the city's service to not only its own non-mass-transit users, but also for the broad hinterland which it serves, these City residents are due the services, and the visitors contribute greatly to the city's financial and other vitalities.

5b. I'm in favour of autonomous private vehicles in perpetuity.

6a. Below are reproduced my notes from seeing a well-presented, comprehensive and informative video by Rosa Koire about Agenda 21 and its relationship to the planning process and other aspects of our guided autocratic development, a one hour and forty three minute video at

<https://forbiddenknowledgetv.net/behind-the-green-mask-agenda-21/>

In this submission, three phrases are high-lighted from my original notes

26:00 precautionary principle;

32:00 in every planning department

57:20 tying transportation dollars to Agenda 21

“The below video runs 1:43:33, was published on Feb 9, 2019, from a forensic appraiser of large commercial real estate in the San Francisco Bay area. Very informative about Agenda 21 and related.

6:40 land control

7:00 social engineering Senate bill 1867 just passed.

13:30 philosophy – all for the common good

15:00 communitarian law

17:40 biggest public relations scam in the history of the world

19:00 climate change – global warming

20:10 1987 Brundtland commission

21:30 1992 action plan from Rio

23:10 three pillars- economy, ecology and equity (social equity)

25:30 China working with US on sterilization vaccine

26:00 **precautionary principle** –Point No. 15 of Agenda 21

28:15 1992 Rio – Geo H.W.Bush signed along with 178 other heads of state, soft law.

28:40 Pres Clinton 1993 – President’s Council on Sustainable Development

31:00 Action Plan

30:28 few million to American Planning Association to come up with a plan to put in every single city, county and state in the entire United States so we get Agenda 21 into every single town in the whole US., took ~ six years, came up with growing smart guide book with model statutes for the management of change.

31:44 by 2002

32:00 you think your city is coming up with these laws..

in every university, in every college, **in every planning department** in the US

34:00 2002 – huge transfer of property taxes, none of us knew about it.

36:00 the new consensus is neutralizing the opposition

36:20 communitarianism is using peer pressure

37:30 Delphi technique, created in the 1960’s, used in the 70’s and 80’s to bring in acceptance of general plans and zoning.

38:00 Delphi – to bring a group of people to a pre-determined outcome

39:30 “Rescue Mission for the earth” –Agenda 21’s children’s book

43:00 Nat’l Geog. new article – cities, the answer to everything cities, the answer to sprawl

50:00 combining transportation and housing

57:20 tying transportation dollars to Agenda 21

57:40 consolidating population, off land to towns then cities

1:03:00 eleven mega regions in the US

1:06:20 the kilo decision 2005, the US Supreme Court decided that the fifth amendment that guarantees that you are entitled to just compensation if you’re taken by eminent domain, but you can only be taken for public use...but redevelopment is not a public use.

1:17:25 removing you from rural areas, suburban areas is the goal.

1:39:10 unions –AFL-CIO 2001 declared anti-sprawl, support smart growth”

6b. And thank-you to the dear correspondent who brought forward this information.

7. During my downtown business involvement from 1974 to 2010

I saw the business property tax increase from 150% of residential assessment to 400% of residential assessment. This trend is inimical to small business and diversity.

8. Additionally, I would take this opportunity to remind that the municipal level of government is key to many related issues, many of which seem seldom raised before elections.

9a. I did, in a more recent year, endeavour to bring forward information on biological effects of electromagnetic fields, but environment committee had zero interest.

9b. At that "meeting", I did engage an apparent member about climate change, and that 'carbon dioxide was bad' was totally believed.

9c. Every person should be aware of the undeniable connection between it and agricultural productivity.

9d. My communication with the city utilities goes back to April 18th of 2011 in efforts to have my electrical "smart meter" changed back to analogue.

I'm not holding my breath. I've declined the smart water meter, and, thankfully, I'm still being provided water although they threatened to cut me off with my third letter of December 23 of 2013.

10. On the matter of wi-fi equipped buses, occupants being exposed to the buses' antenna and cell-phones should understand that they are in a kind of microwave oven.

11. Political decisions bring the burdens of liability to the City. Somebody should learn about possible lack of insurability of wi-fi technology and liability for health and other consequences, including, for example, the health consequences and potential liability accompanying any 5G rollout. The Americans are apparently meekly accepting this even though it is irrational to have the US FCC mandating ignoring health effects, any law or regulation mandating harm simply being not enforceable. In the same way that the liabilities of big pharma and nuclear industries are legislatively limited in extent, so also may the consequential liability of wi-fi developments, including past and future use, totally fall on the unprotected citizenry, for the profits of corporate interests.

12. Fluoride is a poison. That fact won't change before the next election.

My four page January 15, 2012 submission stands.

It ought not be a decision taken by the majority to put a pharmacological substance into the water supply of the 100% of the population. At that "Public Participation Meeting", the volume of excreta from the experts was so toxic, it would not be suitable for composting. Those currently exposed to anecdotal evidence from CBC and mainstream ought to learn about the effects of fluoride delaying the eruption of teeth in the young and associated statistical consequences.

Not only residents of the city but food processors, from small restaurants to large concerns, might be happy to know that no fluoride is being added to the water.

Additionally, more interdisciplinary minded readers might study the very embarrassing history of the "science" at the base of this idea that fluoride is good for you.

With the kind assistance of Chris Gupta, evidence cited in my 2012 fluoride submission was digitized and circulated. Councillors making decisions on this matter must be aware of the extent to which this information is widely known outside the ideological fortresses of the autocrats. Students might reflect on the deficiencies of their educational system.

Lucky number 13. Privatization.

13a. My letter to my councillor of October 16, 2018 included words from Charles Morris, LL.D., and his 1899 tome "XIX Century..." at page 636, the last page of his book:

"...A step in this direction some-

what widely taken in Europe, is the control of railroads and telegraphs by the government. Another step is the control of all municipal functions, including street railways, electric lights, etc., by the city authorities. The latter system, adapted by many European cities, is being actively advocated in the United States, and is gathering to its support a vigorous public opinion which promises to be strong enough in the end to achieve its purpose.”

13b. The unavoidable statement with the phrase “eternal vigilance”: public assets are very attractive large cash cows that will always be the potential prey of corporate interests. The defense of several hundreds of millions of dollars worth of citizens’ assets is left in the hands of trusted elected councillors whose aggregate annual salary represents a vanishingly small percentage of the asset being managed.

13c. This involves a real trust of councillors by citizens such that what happened in Woodstock might be less likely happen in London. The London Free Press report of June 6, 2014 from the Woodstock Sentinel-Review says that the council made their decisions in closed sessions and I do not know whether the Ontario Energy Board approved the sale.

13d. All kinds of deviousness will come from the predators, including talk from provincial government spokespersons about the benefits of mergers. That from the December 17, 2012 London Free Press article which included:

“Sharma has been authorized by London Hydro to pursue partnership and amalgamation with neighbouring utilities.”

Although this information is dated, I would like to see a definitive statement of policy from the Council to the Board of London Hydro concerning the protection of public assets from privatization.

13e. Councillors and citizens need a grasp of the simple difference between interest and principle and the related spending of capital for operating costs, which in the end leaves the citizenry exploited and poorly served.

13f. Three other related issues not heard publicly discussed are first: the corrosion of the water infrastructure by virtue of the fluoride in the water. If the larger maintenance costs are avoided, there will be much larger bills later on, if and when responsibility might come back to Londoners for their system.

13g. The deleterious effects of the wireless environment include an accelerated corrosion of the steel structures of our architecture and infrastructure, along with the biological effects.

13h. Re the 5G coming, this drastically different and more intense technology is understood to, besides communicating with your devices, also connect to your brain.

13i. Paradox present in situation with publically-owned asset able to be developed in the best interest of the citizens, while privatising electricity has pushed the citizens to a position of no control over commitments to very expensive and absolutely dead wrong nuclear.

13j. Another paradox: in my little store, as a sole proprietor, I could arbitrarily decide not to sell certain soy products. A co-operative concern, satisfying all members, was on the receiving end of a plethora of less than desirable foodstuffs, products at the end of an industrial agriculture and biochemical manufacturing process, able to be marketed only because the citizens are so poorly informed about food-ways.

14. SNC-Lavalin, of current notoriety, about June 30, 2011, paid \$15 million for Atomic Energy of Canada Ltd., the intellectual nuclear heritage of the country. The government in turn promised to give “SNC up to \$75 million to complete development of a new reactor...” <https://www.cbc.ca/news/business/aecI-sold-for-15m-to-snc-lavalin-1.985786>

Research is necessary to learn about our worsening situation, the notion of nuclear power is totally past.

15a. Oxygen.

Very early in the 1900's, Germany had developed oxygen technology for the purposes of sanitizing water.

15b. Before the construction of the Canada Games Aquatic Centre, I gave Mr Bill Kennedy, then chair of the Public Utilities Commission a brief about the use of oxygen technology for sanitizing water. The brochure which first came out spoke about the new healthy sanitization system. A few years later I was told that the price of the electronic lane timers were so high that cuts had to be made.

15c. The May 17, 2013 London Free Press has a story about the use of a new hydrogen peroxide system to enable reduction in the chlorine used in the Glencoe and area water system. There's one anecdotal report that this provides a decent cup of tea.

15d. In the late 1970's, I purchased the library of Mr. T. A. Gagen, the city engineer from the late 1940's to I think the late 1960's. Before the fluoride meeting in 2012, I reviewed the several applicable volumes to learn that there was very close to zero in his information about anything other than chlorine. His 1944 book "Water Purification" by the US Corps of Engineers was 100% about chlorine and exemplifies the role of the war and immediately following years in setting the technological agenda for what seems forever in opportunity costs with respect to our non-use of relatively long-term available benevolent methods.

16. As has been said, we might not be able to control anything at higher levels but we should try hard at the municipal level.

17. It's all our money.

Conrad K. Odegaard

From https://en.wikipedia.org/wiki/Agenda_21

“**Agenda 21** ^[1] is a non-binding action plan of the **United Nations** with regard to **sustainable development**.^[2] It is a product of the **Earth Summit** (UN Conference on Environment and Development) held in **Rio de Janeiro**, Brazil, in 1992. It is an action agenda for the UN, other **multilateral** organizations, and individual governments around the world that can be executed at local, national, and global levels.

The "21" in Agenda 21 refers to the 21st century. It has been affirmed and had a few modifications at subsequent UN conferences...”
