**Re: Servicing Feasibility Study
Proposed Residential Development
348 Sunningdale Rd E, London, Ontario**

1. INTRODUCTION

This Servicing Feasibility Study (Study) has been prepared by Strik, Baldinelli, Moniz Ltd. (SBM) for Westchester Homes to address the servicing feasibility for the proposed residential development located at 348 Sunningdale Rd E, London, Ontario. It is our understanding that the existing single family dwelling (Municipal No. 348) and driveways have been demolished. Two (2) townhouse blocks (for a total of seventeen (17) units) are proposed for the site. The total site area is approximately 0.63 ha and is located on the north side of Sunningdale Rd E.

The site abuts vacant land for future development on its east and west sides, open space on its north side, and the Sunningdale Rd E Right-Of-Way on its south side. Single family dwellings are located across the street. An oil pipeline easement 6.096m wide runs along the north side of Sunningdale Rd E.

This Study is to determine the adequacy of the existing City of London (City) services in support of an Zoning By-Law Amendment (ZBA) application for the proposed redevelopment.

2. WATER SERVICING

There is an existing 1,200mm concrete watermain on the north side of Sunningdale Rd E and a 400mm PVC watermain on the south side of Sunningdale Rd E. The development will be serviced by the 400mm PVC watermain. The fire hydrant flow test provided by the City is attached to this study. A new 150mm diameter water service is proposed for the development.

2.1 *Water Supply for Fire Protection*

The new 150mm diameter water service will provide firefighting flows to a new site hydrant. Firefighting flows were determined using Section 3.2.5.7 of the 2012 Ontario Building Code. A building area of 600 m² (largest building area permitted under Part 9 of the OBC) was assumed, of combustible construction and 11 m in height. Upon review of the fire flow test results (attached to this study) as tested on April 6, 2017, and using linear extrapolation of the pressure readings at the provided flow rates from the hydrant, there is sufficient residual pressure within the system. At the required fire flow + maximum day demand rate of 9,032 L/min, the residual pressure in the system would be approximately 25 psi which exceeds the minimum required 20 psi in fire-flow scenarios. Please refer to the calculations attached to this Study.

Based on the above, the existing 400mm PVC watermain fronting this property has sufficient capacity fire-fighting for this development. Based on 2012 OBC requirements, a fire hydrant should be located 90 m from the fire-fighters entrances to all units. As no fire hydrants are located in the right-of-way nearby, new private or municipal hydrant(s) are proposed.

2.3 Domestic Water Supply

Since the anticipated average day and peak hour domestic demands would be far less than the maximum day + fire-fighting demand, and the municipal water distribution system is adequate for the maximum day + fire protection demand, it can be concluded that adequate water supply for domestic demand is available for the proposed development.

3. SANITARY SERVICING

As indicated in the Record of Pre-Application Consultation date August 22, 2017, there is currently no municipal sanitary sewer fronting the subject property on Sunningdale Rd E. As per the City's Drawings 25,716 and 25,718, the subject site is part of Area A42 External Area – Medium Density Residential (75 units/ha, 2.4 ppu). The proposed seventeen (17) townhouse units on the 0.63 ha site result in a population density of approximately 27 units/ha.

Since the proposed sanitary sewer fronting Sunningdale Rd E is not expected to be constructed for over 10 years, it is proposed to outlet the development to the sanitary sewer in the Lindisfarne Rd R.O.W.

The proposed flows from the subject property are shown on the Sanitary Sewer Design Sheet appended to this Study. The Lindisfarne Road and Skyline Avenue sanitary flows were recalculated using the design criteria of 230 L/capita/day as per the City of London DS&RM 2018, updated to include the flows from the subject site (called EXT.4 in the design sheet) as well as the proposed flows from area on Sunningdale Rd E, immediately west of Lindisfarne Rd, shown on the City's drawing 25,716 (called EXT.3 in the design sheet). These two areas (EXT.3 and EXT.4) are shown on the attached marked up Sheet 8 in red text. The calculations show that the existing sewers have capacity for the proposed development, and that flows actually decrease from the flows shown on the City's drawing 25,718 and 18,994.

The municipal sewer in the Lindisfarne Road R.O.W. is proposed to be extended up to and along Sunningdale Rd E such that it will front the subject site. Refer to the attached Conceptual Sanitary Servicing, Drawing SK-1. As illustrated in the drawing, it is feasible to extend the municipal sewer as shown and install a shallow gravity service to the subject site.

4. STORM SERVICING AND STORMWATER MANAGEMENT

There is no municipal stormwater sewer available for the subject property. Based on the survey provided and the City's Drawing 25,712, it appears that stormwater generally flows overland to the west edge of the property.

As per the City's Drawing 25,712, the subject site outlets directly to the wetland to the north of the subject property. This outlet will be maintained under post-development conditions. Quality and quantity controls will be provided in accordance with the requirements identified in the Stoney Creek Subwatershed Study to ensure post-development runoff matches pre-development levels.

5. SUMMARY

Based on the above, the existing City services seem to have sufficient capacity to accommodate the proposed redevelopment of the 0.63 ha subject site located at 348 Sunningdale Rd E, London.

6. LIMITATIONS

This Study was prepared by Strik, Baldinelli, Moniz Ltd. for Zelinka Priamo, Westchester Homes (owner) and the City of London. Use of this report by any third party, or any reliance upon its findings, is solely the responsibility of that party. Strik, Baldinelli, Moniz Ltd. accepts no responsibility for damages, if any, suffered by a third party as a result of decisions made or actions undertaken as a result of this report. Third party use of this report, without the express written consent of the Consultant, denies any claims, whether in contract, tort, and/or any other cause of action in law, against the Consultant.

All findings and conclusions presented in this design brief are based on site conditions as they appeared during the period of the investigation. This report is not intended to be exhaustive in scope, or to imply a risk-free development. It should be recognized that the passage of time may alter the opinions, conclusions, and recommendations provided herein.

The design was limited to the documents referenced herein and SBM Ltd. accepts no responsibility for the accuracy of the information provided by others. All designs and recommendations presented in this brief are based on the information available at the time of the review.

This document is deemed to be the intellectual property of Strik, Baldinelli, Moniz Ltd. in accordance with Canadian copyright law.

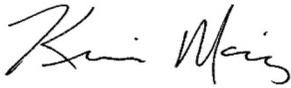

7. CLOSURE

We trust this Study meets your satisfaction. Should you have any questions or require further information, please do not hesitate to contact us.

Respectfully submitted,

Strik, Baldinelli, Moniz Ltd.
