RE: Mandatory face coverings bylaw Update.

September 20,2020

Dear Council I would like you to schedule a public participation meeting, so that I can ask bylaw,

- a) why a local media person informed me that they had to " inflate" covid Covid 19,
- b) why a Registered Nurse in London Health Sciences I know for over 20 years, was LAID OFF during the initial Covid 19 panic media ? whereby the public was told the hospitals are full of covid patients and deaths. There were apparently thousands of Nurses coordinated at the same time to be laid off at which many find is a contradiction according to the pandemic severity of this apparent Covid 19? Which is so contagious and fatal that a instant mandatory mask wearing by-law and fines were initiated. ?
- c)Furthermore, it's apparent that the masks that people are forced to wear, actually **do not protect them from covid-19.** it is written right on the product box itself which again is another contradiction.? So why are citizens being muzzled ? Several doctors and epidemiologists globally, including in London, were and still are trying to communicate and warn civilians about the mask wearing health cautions and side effects and also covid 19 and relating information to the public for their Mental and Physical health , however the social media platforms conspicuously halted and shut down their proven medical information and supporting documents?

I would hope that Council will cooperate and allow to schedule a public meeting so that we can all understand why there are so many contradictions to this apparent "very severe covid-19 which has crippled everyone's life, economy and created many suicides (which the media has chosen not to discuss on air publicly) or why the covid 19 daily counts which apparently are fluctuating are mainly including a " possible " coronavirus with one of 22 symptoms? Please refer to "how" the Covid 19 number are formulated. Public Information.

Coronavirus Disease 2019

Test for Past Infection

Updated June 30, 2020

[Other Languages](#) ▾

Antibody tests check your blood by looking for antibodies, which may tell you if you had a past infection with the virus that causes COVID-19. Antibodies are proteins that help fight off infections and can provide protection against getting that disease again (immunity). Antibodies are disease specific. For example, measles antibodies will protect you from getting measles if you are exposed to it again, but they won't protect you from getting mumps if you are exposed to mumps.

If you test positive

- A positive test result shows you may have antibodies from an infection with the virus that causes COVID-19. However, there is a chance a positive result means that you have antibodies from an infection with a virus from the same family of viruses (called coronaviruses), such as the one that causes the common cold.

I am exempt from the Provincial Health Officer's regulation mandating face mask usage. Wearing a facemask poses a health risk to me.

Under the CHRA, and PIPEDA, I am not required to disclose my medical condition to you.

Violation of Disability Rights, under the Canadian Human Rights Act or Canadian Charter of Rights and Freedoms can be reported to 1-888-214-1090

The Canadian Human Rights Act not only prohibits discrimination at the federal level, it also establishes a human rights commission system to administer and enforce the Act.

Also below the very reputable New England Journal of Medicine has also disclosed important information.

Many are seeing Covid 19 and masks as more of an agenda vs a serious Public Health matter could you please answer all these queries by allowing a Public meeting?

Respectfully,

Susan Horvath
